HIOKI

POWER QUALITY ANALYZER PQ3198, PQ3100

NEW

Investigate power characteristics and analyze the causes of problems

Exceptional ease of use and international standard-compliant reliability

Maintain and manage power supplies and analyze problems more easily and reliably than ever before

POWER QUALITY ANALYZER PQ3198 and PQ3100

The critical importance of electrical power in today's society necessitates daily maintenance and management to ensure that problems don't occur. When they do, for example due to an equipment failure or abrupt surge in demand, engineers face the need to analyze the cause quickly. The POWER QUALITY ANALYZER PQ3198 and PQ3100 provide robust support for field personnel who need to analyze power characteristics in the form of measurement capabilities that reliably captures the full range of power anomalies and exceptional ease of use throughout the entire user experience, from connecting the instrument to recording data.

PQ3198

PQ3100

Analyze equipment power problems

Capture the full range of power supply anomalies, including momentary interruptions, voltage drops, and frequency fluctuations, while recording trends to help investigate the causes of unexpected equipment malfunctions and sudden stoppages.

Record quality data for power systems

Record fluctuations in voltage, current, power, harmonics, and flicker when connecting a highly variable system such as a renewable energy source or EV charging station to the grid. Easily analyze the data with the included PQ ONE software.

Measure AC/DC power

Use AC/DC auto-zero current sensors to measure DC current accurately over extended periods of time. Since the sensors are powered by the instrument, there's no need to set up a separate power supply.

Troubleshoot power supplies and verify power quality PQ3198

Features

Class A compliance under international standards

Basic voltage measurement accuracy of ±0.1%

High-voltage, wideband performance

Two-circuit measurement

Simple inverter measurement

400 Hz line measurement

GPS time synchronization

Extensive array of event measurement parameters

Applications

Investigate power supply anomalies

Investigate the causes of equipment failures and malfunctions, including issues that are difficult to identify, such as when a device causes a properly-functioning piece of equipment that is connected to the same power outlet to experience a voltage drop.

Verify the quality of power from a solar power system

Check fluctuations in the output voltage of a power conditioner in a solar power system along with flicker and transient voltages. You can also measure fluctuations in the frequency of the grid interconnection and fluctuations in the harmonic voltage and current components of the system's output.

Verify the quality of power supplied by an EV rapid charger

Since the PQ3198's fourth voltage channel is isolated from its first three voltage channels, the instrument can measure power and efficiency across two separate circuits. For example, you can verify the quality of the input (AC) and output (DC) of an EV rapid charger while simultaneously measuring power and efficiency between input and output.

High-precision, wideband, broad-dynamic-range measurement

The PQ3198 delivers the high-end specifications and high reliability needed to capture the full range of power anomalies and analyze the underlying data with a high degree of precision.

International standard IEC 61000-4-30 Ed. 2 Class A compliant

The PQ3198 complies with the IEC 61000-4-30 Ed. 2 Class A standard. As a result, it can perform standard-mandated measurement tasks such as gapless, continuous calculation; detection of events such as swells, dips, and interruptions; and time synchronization using GPS (optional).

Basic measurement accuracy (50/60 Hz)

Voltage	±0.1% of nominal voltage
Current	±0.1% rdg. ±0.1% f.s. + current sensor accuracy
Power	±0.2% rdg. ±0.1% f.s. + current sensor accuracy
Frequency	200ms: ±0.02Hz / 10s: ±0.003Hz

Thanks to basic measurement accuracy that is among the best of any instrument in the industry, the PQ3198 offers high-precision measurement without the need to switch voltage ranges.

Class A

Part of the IEC 61000-4-30 international standard, Class A defines power quality parameters, accuracy, and standard compliance to facilitate the comparison and discussion of measurement results from different instruments.

High-voltage, wideband performance

The PQ3198 can measure transient voltages of up to 6000 V lasting as little as $0.5 \,\mu$ s (2 MS/s). It can also measure high-order harmonic components from 2 kHz to 80 kHz. As inverters enter into widespread use, malfunctions and failures in that frequency band are becoming more common.

Voltage measurement range

Voltage frequency band

The PQ3198's wideband capability extends from DC voltages to 700 kHz.

The PQ3198 can measure voltages of all magnitudes using a single range.

Two-circuit measurement

Since the PQ3198's fourth voltage channel is isolated from its first three voltage channels, the instrument can measure power and efficiency across two separate circuits.

Applications

- Simultaneous measurement/monitoring of the primary (AC) and secondary (DC) sides of an EV rapid charger
- Simultaneous measurement/monitoring of the primary (DC) and secondary (AC) sides of a solar power system
- Simultaneous measurement of the primary (DC) and secondary (AC) sides of a DC/AC (3-phase) inverter
- Simultaneous measurement of the primary and secondary sides of a UPS
- Simultaneous measurement of power supply (AC) and control (DC) circuits
- Simultaneous measurement of a 3-phase line and a ground line
- Simultaneous measurement of a neutral line to detect ground *For DC measurement, an AC/DC Auto-Zero Current Sensor is required

In addition to 50/60 Hz, the PQ3198 can measure a line frequency of 400 Hz.

Simple inverter measurement

The PQ3198 can measure the secondary side of inverters with a fundamental frequency of 40 to 70 Hz and a carrier frequency of up to 20 kHz. It can also measure the efficiency of DC/3-phase inverters.

GPS time synchronization

The GPS OPTION PW9005 can be used to correct the instrument's internal time to UTC standard time. This capability eliminates any time difference between instruments to allow analysis that preserves the simultaneity of phenomena measured with multiple instruments.

Mid-range model

Investigate power supply conditions and prevent problems PQ3100

Features

Applications

Investigate power supply conditions

Measure voltage fluctuations, equipment capacity, and harmonics before installing new electrical equipment. You can also check whether newly installed equipment is affecting other equipment by repeating those measurements after installation and comparing the results.

Prevent power supply problems

Discover signs of impending problems by repeatedly measuring a component such as an elevator motor on a regular basis. Flexible current sensors make it possible to connect the instrument safely and easily, even in difficult settings involving double wiring, busbars, and crowded distribution boards.

Perform load rejection testing of solar power systems

In load rejection testing, it's necessary to record transient changes in current and voltage when the system is taken offline. The PQ3100 can record anomalous waveforms for up to 11 seconds (1 second before and 10 after each event). Cursor measurement lets you verify peak values and duration as well.

QUICK SET: Easy-to-understand measurement guidance

Launch QUICK SET to navigate the connection and setup processes so you can get started recording quickly.

You need only set the recording parameters and interval in order to start measurement. Recording parameters can be set simply by choosing a simple setup preset. (See page 8 for details.)

Recording of 11 sec. before and after events

The PQ3100 can record waveforms for up to 1 second before an anomaly and 10 seconds after. This capability is useful when you need to analyze waveforms before and after an anomaly, perform load rejection testing of a solar power conditioner, or verify that a piece of equipment has returned to normal operation.

Up to 8 hours of battery operation

The PQ3100 features an energy-saving design and a longlasting battery. The bundled rechargeable battery lets you continue measurement in the event of a power outage or take the instrument into the field to make measurements in locations where AC power is not available.

Display of event statistics

Check the number of times each type of event has occurred as well as the worst value for each.

Demand recording

Record power consumption over time.

Measurement functionality and data recording capabilities that ensure you'll capture the full picture with a single measurement

Capture power anomalies reliably with simple settings

The PQ3198 and PQ3100 can measure all parameters at once, including power, harmonics, and anomaly waveforms. The instruments also provide simple setup functionality for automatically configuring recording parameters for popular applications.

Capture power supply anomalies reliably

Transient voltages

Capture phenomena characterized by precipitous voltage changes and high peak values caused by lightning or circuit breaker or relay contact issues or tripping.

Voltage swells

Capture phenomena characterized by a momentary rise in voltage, for example due to lightning or power line switching.

Voltage dips

Capture phenomena characterized by a short-duration drop in voltage when a large inrush current occurs, for example due to motor startup.

Interruptions

Capture phenomena characterized by a stoppage in the supply of power, for example when lightning interrupts power or when a power supply shortcircuit trips a circuit breaker.

Frequency fluctuations

Capture frequency fluctuations caused when generator operation becomes unstable due to an abrupt increase or decrease in load.

Simple, one-touch setup

Simple setup functionality for simplified configuration of recording parameters

Simply choose the preset that suits your application, and the instrument will automatically configure the recording parameters.

Voltage anomaly detection
Basic power quality measurement ^{*1}
Inrush current measurement
Measured value recording ^{•2}
EN 50160

Capture voltage and frequency anomalies. Augment the voltage anomaly detection preset by capturing current and harmonic anomalies as well

Capture inrush current.

Record only time-series data.

Perform measurement based on the EN 50160 standard.

*1: PQ3198 only. *2: This feature is known as "Trends only" for the PQ3100.

Automatic sensor detection to avoid erroneous measurement

Simply connect current sensors, touch "Sensor" on the screen, and the instrument will automatically detect sensor types and maximum current ranges.

Connect sensors > Touch "Sensor" for automatic identification

Capture phenomena characterized by a large current that flows momentarily when a device starts up upon receiving power, for example electric equipment and motors.

Harmonics

Capture phenomena characterized by distortions in voltage and current waveforms that are caused by semiconductor control devices.

High-order harmonics

Capture phenomena characterized by distortions in voltage and current waveforms caused by noise components from semiconductor control devices such as those used in electronic device power supplies.

Unbalance

Observe voltage and current waveform distortion, voltage dips, and negative-phase-sequence voltage that occur when the loads connected to individual phases in a 3-phase power supply change or when unstable equipment operation increases the load on a specific phase.

Easy-to-understand display of parameters

Since you can switch the display to show all measurement parameters while measurement is underway, it's easy to check conditions. *Screenshot shows the PQ3100 display.

RMS values

Extensive event parameters

Simple, one-touch setup

Vectors

Simultaneously record event waveforms and trend graphs

Each time it makes a measurement, the PQ3198/PQ3100 records trend data for all parameters. When a power anomaly is detected, an event is recorded. Since the instrument records the maximum, minimum, and average values during the interval, you can rest assured that you won't miss peak values.

Simultaneous recording of waveforms and trend data

Event waveform

When an event occurs, the instrument records the instantaneous waveform for 0.2 seconds. Triggers can be set for all event parameters in parallel, and you can check recorded data on the display while measurement is in progress.

Flicker

The PQ3198/PQ3100 can simultaneously measure and record three channels of ΔV10 or IEC flicker.

Δ -Y, Y- Δ conversion function

When measuring a 3-phase/3-wire (3P3W3M) circuit or a 3-phase/4-wire circuit, the PQ3198/ PQ3100 can switch between phase voltage and line voltage without changing the voltage connections.

Extensive

range of

recording pa-

rameters

Designed to accommodate every possible application so that it's easy to use in all field settings

Clamp sensors for every application

Flexible sensors: Easy installation in confined locations

Flexible current sensors provide a convenient way to measure double- and triple-wired power supplies and in confined locations, with capacities of up to 6000 A.

No need for an external power supply

Since sensor power is supplied by the instrument, there's no need for an AC adapter when using AC/DC sensors or flexible sensors.

Auto-zero sensors: Stable measurement of DC power over extended periods of time

Auto-zero current sensors allow measurement of DC power over extended periods of time, eliminating the need to concern yourself with zero-point drift.

Wide array of ranges to accommodate all applications

Use HIOKI sensors in an array of applications to measure equipment ranging from the secondary side of CTs to high-current wiring. The CT7136 offers three ranges* (5 A/50 A/500 A), as do HIOKI's flexible sensors (50 A/500 A/5000 A). Since the effective measurement range extends to 120% of the nominal range, flexible sensors can be used to measure currents of up to 6000 A. *PQ3100 (PQ3198: 2 ranges [50 A/500 A]).

Delivering both safety and high accuracy

Exceptional safety

The PQ3100 supports CAT III (1000 V*) and CAT IV (600 V) situations, so it can safely measure service drops and distribution panels with a terminal-to-ground voltage of up to 1000 V. *PQ3100 only (PQ3198: CAT IV [600 V]).

High accuracy

The PQ3198 complies with IEC 61000-4-30 Ed. 2 Class A, and the PQ3100 with IEC 61000-4-30 Class S, ensuring both instruments' ability to deliver highly reliable, high-precision measurement.

	PQ3198	PQ3100
Voltage RMS value accuracy	±0.1% of nominal voltage	±0.2% of nominal voltage
Swell/dip/interruption	±0.2% of nominal voltage	±0.3% of nominal voltage

Convenient tools

When it's hard to clip leads to terminals

In locations where it's hard to attach alligator clip-style leads to metal terminals, you can replace the tips of the voltage cords with magnetic adapters so that you can more easily detect the voltage.

Magnetic design

(diameter: 11 mm)

Magnetic adapters Red: 9804-01

Black: 9804-02

Magnetic adapters are easy to affix to terminals in confined locations.

Extensive range of interfaces

Remote control via Ethernet

Use the PQ3198/PQ3100's HTTP server function to configure and monitor the instrument from a browser. You can also download data using the instrument's FTP server function.

Email notification function*

The instrument can send emails when an event occurs or at a regular time every day. *PQ3100 only

Secure the PQA to the side of a distribution panel

Use two heavy-duty magnetic straps to attach the instrument to the side or door of a distribution panel.

Magnetic straps can also be used to help

keep voltage cords from coming loose.

 Heavy-duty magnetic straps

Magnetic straps Heavy-duty type: Z5020 Standard type: Z5004

Transfer data to a logger wirelessly*

Pair a data logger (that supports LR8410 Link) to the instrument via Bluetooth[®] wireless technology to transfer measured values for up to six parameters to the logger. In this way, you can use a single data logger to aggregate measurement data from multiple locations.

*PQ3100 only. Connection requires a serial-Bluetooth[®] wireless technology conversion adapter as recommended by HIOKI. Please contact your HIOKI distributor for more information.

Extended recording times supports permanent installation

Extended recording to an SD memory card

The PQ3198/PQ3100 can record time-series data and event waveforms to an SD memory card. Choose from 2 GB and 8 GB cards.

PQ3198 recording times (when using a 2 GB SD card)

Analyze data and generate reports with PQ ONE power quality analysis software

Examples of the types of analyses that can be performed with PQ ONE

Event statistics

Display statistics about events by date or time. This feature makes it easy to discover anomalies that occur at particular times of day or on particular days of the week. In addition, you can perform ITIC (CBEMA) curve analyses (using tolerance curves), which are used by power quality management standards in the U.S.

ITIC curve

Perform ITIC (CBEMA) curve analyses (using tolerance curves), which are used by power quality management standards in the U.S. This feature lets you display the event duration and worst values for voltage swells, voltage dips, and interruptions.

Example ITIC curve screen

Event details

Analyze 200 ms event waveforms, including waveforms, harmonics, vector, and numerical displays. You can also display 30 sec. event fluctuation data, transient waveforms, high-order harmonic waveforms¹, high-order harmonic frequency analysis data¹, and 11 sec. waveforms preceding events². *1: PQ3198 only. *2: PQ3100 only.

Example voltage dip screen (30 sec. event fluctuation data)

Event list

Display statistics about events by date or time of day. This feature makes it easy to discover power supply anomalies that occur at particular times of day or on particular days of the week.

-	No.	Time	Event	I/O	CH
Ŧ	116	11:18:40.225	Uthd	IN	CH3

	128	15:57:19.268	Uthd	IN	CH1
ha	128	15:57:19.268	Uthd	IN	CH2
	128	15:57:19.268	Uthd	IN	CH3
Ŧ	129	15:57:19.469	Uthd	OUT	CH1

Click the event statistics bar graph to display the event list.

Trend graphs

Display voltage, current, frequency, harmonics, unbalance factor, power, energy, and other data as a time series. Set the display range as desired on the screen and output reports with the shown data. PQ ONE can generate a demand display for the PQ3198, even though that model does not include demand measurement.

Peak level display

Display a bar graph showing peak values during the voltage harmonic or current harmonic trend display interval. You can check average peak and maximum peak measured values for the period of time selected with the cursor to the right of the graph.

Peak level detection interval

Average peak and maximum peak details

High-order harmonics and frequency analysis display*

Display high-order harmonic event waveforms (2 to 80 kHz) and associated frequency analysis data. By displaying the frequency analysis, you can determine the frequency band in which noise is occurring. *PQ3198 only.

Example high-order harmonics and frequency analysis screen

Statistics display function

Present statistical data for voltage, current, frequency, harmonics, flicker and other parameters on the Statistics screen. You can also see the maximum and minimum (with time of occurrence), average, 5%, 50%, or 95% of the value (default values, user settable) of any selected parameter.

Example frequency screen

EN 50160 judgment function

Evaluate whether data complies with the EN 50160 standard by analyzing it and generating a judgment based on voltage fluctuations during the trend interval. You can also customize the judgment criteria and parameters.

Report creation

Automatically generate reports in Microsoft Word* by simply selecting the necessary data categories. Add comments as required.

*Microsoft Word is a product of Microsoft Corporation.

parameters

Output a report with only the necessary data

CSV conversion and PQDIF output function

Output CSV and PQDIF format files for the parameters you choose. PQDIF format files can also be uploaded to the software.

PQDIF output settings screen

Compute TDD (Total Demand Distortion) based on the IEEE519 standard

Calculate TDD using PQ ONE.

$$TDD_{I} = \sqrt{I_{2}^{2} + I_{3}^{2} + \ldots + I_{49}^{2} + I_{50}^{2}} / I_{I}$$

I,: Maximum current demand (configure in PQ ONE)

Display language

WIRELESS LOGGING STATION LR8410	Temperature Analog Input	Instantaneous value of each interval	sintananoodo, alopidying grapho	measurement will stop

Get results from the job site in real-time

Present data from multiple sources as a graph or list together in real-time

Other functionality

LAN remote control function

The application displays a virtual instrument and allows you to control it directly with the mouse. You can also easily change instrument settings and control the instrument, for example to start and stop measurement.

LAN automatic file download function

This function lets you acquire data in real time on a PC, including data created when the instrument's trigger is activated and measurement files that are automatically generated on a daily basis. Example uses include capturing abnormal phenomena with an instrument installed in the field and automatically acquiring daily power consumption data on a PC.

comparison chart

PQ3198 features The PQ3198 offers an extensive range of event parameters. This model is ideal for use in troubleshootingrelated measurement since it can capture a variety of power supply anomalies. Additionally, it can measure power and efficiency across two circuits carrying different voltages (3-phase and DC, etc.).

PQ3100 features

The PQ3100 offers the QUICK SET function, which makes it easy to generate reliable measurements. Additionally, it can record 11 sec. event waveforms, yielding extended waveforms when anomalies occur. It can also be used in applications such as load rejection testing of solar power systems.

Model		PQ3198	PQ3100			
IEC 61000-4-30) standard compliance	Class A	Class S

Recording settings	PQ3198	PQ3100		
Recording interval	1/3/15/30 sec., 1/5/10/15/30 min., 1/2 hr.,	200/600 ms, 1/2/5/10/15/30 sec., 1/2/5/10/15/30 min., 1/2 hr., 150/180		
	150 (50 Hz)/180 (60 Hz)/1200 (400 Hz) cycle	cycle *When set to 200/600 ms, harmonic data saving (except total harmonic		
		distortion and K factor), event recording, and copy key operation during recording are not available.		
Saving of screenshots	Off/On The display screen is saved as a BMP file for each recording interval. Mir			
Folder/file names	Not user-configurable	Set to either automatic or user-specified (5 single-byte characters).		
Event specifications				
Event detection method	The detection method for measured values for each event is noted in the			
	External events: Events are detected by detecting a signal input to the EV Manual events: Events are detected based on operation of the MANUAL			
Synchronized saving of events	Event waveforms: A 200 ms instantaneous waveform is recorded when an event occurs.	Event waveforms: A 200 ms instantaneous waveform is recorded when an event occurs.		
events	Transient waveform: Instantaneous waveforms are recorded for 2 ms	Transient waveform: Instantaneous waveforms are recorded for 1 ms		
	before the transient voltage waveform detection point and for 2 ms after the detection point.	before the transient voltage waveform detection point and 2 ms after the detection point.		
	Fluctuation data: RMS value fluctuation data is recorded every half-wave for the equivalent of 0.5 sec. before the event occurs for the equivalent of 0.5 sec. before the event occurs			
	and 29.5 sec. after the event occurs. High-order harmonic waveform: A 40 ms instantaneous waveform is	and 29.5 sec. after the event occurs.		
	recorded when a high-order harmonic event occurs.			
Event settings				
Event hysteresis	0% to 100%			
Timer event count	Off, 1/5/10/30 min., 1/2 hr.	Off, 1/2/5/10/15/30 min., 1/2 hr.		
Waveforms before	Events are generated at the selected interval. 2 waves	Events are generated at the selected interval. Off (0 sec.) / 200 ms / 1 sec.		
events		The time for which to record instantaneous waveforms before events occur can be set.		
Waveforms after events	Successive events: Off/1/2/3/4/5	Off (0 sec.)/200 ms/400 ms/1 sec./5 sec./10 sec.		
	The set number of events is repeated each time an event occurs.	The time for which to record instantaneous waveforms after events occu can be set.		
Other functionality		-		
		at: Compressed BMP		
Removal of SD card while recording data	Not supported	A messages is displayed if the user pressed the F key on the FILE screen while recording with a recording interval of 2 sec. or greater; the		
Automatic data ation of		SD card can be removed once message is reviewed.		
Automatic detection of current sensors	When selected on the settings screen, connected sensors that support the	THORIPL 14 connector are automatically detected.		
Processing in the event of a power outage	If the instrument is equipped with a BATTERY PACK Z1003 with a remain continue recording. If no charged BATTERY PACK Z1003 is installed, me	ing charge, the instrument will switch automatically to battery power and		
	start recording again when power is restored. However, integrated values

Frequency band

of range.

Options [*1] PQ3198 only. [*2] PQ3100 only.

Model	AC CURRENT SENSOR CT7126	AC CURRENT SENSOR CT7131	AC CURRENT SENSOR CT7136	
Appearance				
Rated measured current	60 A AC	100 A AC	600 A AC	
Measurable wire diameter	15 mm (0.5	9 in.) or less	46 mm (1.81 in.) or less	
Current range and combined amplitude accuracy (45 to 66 Hz) *Accuracy guaranteed up to 120% of range.	Current range Combined accuracy 50.000 A 0.4% rdg. + 0.112% f.s. 5.0000 A 0.4% rdg. + 0.22% f.s. 500.00 mA 0.4% rdg. + 1.3% f.s. [*2]	Current range Combined accuracy 100.00 A 0.4% rdg. + 0.12% f.s. 50.000 A 0.4% rdg. + 0.14% f.s. 5.0000 A 0.4% rdg. + 0.50% f.s. [*2]	Current range Combined accuracy 500.00 A 0.4% rdg. + 0.112% f.s. 50.000 A 0.4% rdg. + 0.22% f.s. 5.0000 A 0.4% rdg. + 1.3% f.s. [*2]	
Phase accuracy (45 to 66 Hz)	Within ±2°	Within ±1°	Within ±0.5°	
Maximum allowable input (45 to 66 Hz)	60 A continuous	130 A continuous	600 A continuous	
Maximum rated terminal-to- ground voltage	CAT III	(300 V)	CAT III (1000 V), CAT IV (600 V)	
Frequency band				
Dimensions / weight / cord length	46 mm (1.81 in.) (W) × 135 mm (5.31 2.5 m (78 mm (3.07 in.) (W) × 152 mm (5.98 in.) (H) × 42 mm (1.65 in.) (D) / 350 g / 2.5 m (8.20 ft.)		
Model	AC FLEXIBLE CURRENT SENSOR CT7044	AC FLEXIBLE CURRENT SENSOR CT7045	AC FLEXIBLE CURRENT SENSOR CT7046	
Appearance				
Rated measured current				
Measurable wire diameter	100 mm (3.94 in.) or less	180 mm (7.09 in.) or less	254 mm (10.00 in.) or less	

Current range 5000.0 A/500.00 A

50.000 A

Combined amplitude accuracy

1.6% rdg. + 0.4% f.s. 1.6% rdg. + 3.1% f.s.

Within $\pm 1.0^{\circ}$

Phase accuracy (4	5 to 66 Hz)	Within		±1.8°		Within ±2.3°	
Offset drift		Within ±0.5% f.s.		Within ±0.1% f.s.		Within ±0.1% f.s.	
Maximum allowable input (45 to 66 Hz)		100 A continuous		600 A continuous		2000 A continuous	
Maximum rated terminal-to- ground voltage		600 V AC/DC (CAT IV)		1000 V AC/DC (CAT III)), 600 V AC/DC (CAT IV)	
Frequency band				DC to 5 kHz (-3 dB)			
Dimensions / weight / cord length		58 mm (2.28 in.) (W) × 132 mm (5.20 in.) (H) × 18 mm (0.51 in.) (D) / 250 g / 2.5 m (8.20 ft.)		64 mm (2.52 in.) (W) × 160 mm (6.30 in.) (H) × 34 mm (1.34 in.) (D) / 320 g / 2.5 m (8.20 ft.)		64 mm (2.52 in.) (W) × 195 mm (7.68 in.) (H) × 34 mm (1.34 in.) (D) / 510 g / 2.5 m (8.20 ft.)	

Model	AC LEAK CURRENT SENSOR CT7116			
Appearance	Designed specifically for leak current measurement			
Rated measured current	6 A AC			
Measurable conductor diameter	40 mm or less (insulated conductor)			
Current range and combined amplitude accuracy (45 to 66 Hz)	Current range Combined accuracy 5.0000 A 1.1% rdg. + 0.16% f.s. 500.00 mA 1.1% rdg. + 0.7% f.s. 50.000 mA 1.1% rdg. + 6.1% f.s.			
Phase accuracy (45 to 66 Hz)	Within ±3°			
Frequency band	40 Hz to 5 kHz (±3.0% rdg. ±0.1% f.s.)			
Residual current characteristics	5 mA or less (for a pair of round-trip wires carrying 100 A)			
External magnetic field effects	5 mA equivalent, max. 7.5 mA (400 A/m, 50/60 Hz)			
Dimensions / weight / cord length	74 mm (2.91 in.) (W) × 145 mm (5.71 in.) (H) × 42 mm (1.65 in.) (D) / 340 g / 2.5 m (8.20 ft.)			

Voltage measurement options

HIOKI provides quotations for voltage cord extensions, terminal connector conversions, and other options on a case-by-case basis. Please contact your HIOKI distributor for details.

MAGNETIC ADAPTER 9804-01 Alternative tip for the L1000 series voltage cords, red ×1, φ11 mm (0.43 in) MAGNETIC ADAPTER 9804-02 Alternative tip for the L1000 series voltage cords, black $\times 1$, $\varphi 11$ mm (0.43 in)

GRABBER CLIP 9243 Alternative tips for the L1000 series voltage cords

OUTLET TEST LEAD L1020 For Japan (3-prong, P/N/E), 2 m (6.56 ft) length. *Please contact HIOKI for cords for use in

countries other than Japan.

PATCH CORD L1021-01

Banana branch-banana, Red: 1, 0.5 m (1.64 ft) length, for branching from the L9438s or L1000s, CAT IV 600 V, CAT III 1000 V

PATCH CORD L1021-02

Banana branch-banana, Black: 1, 0.5 m (1.64 ft) length, for branching from the L9438s or L1000s, CAT IV 600 V, CAT III 1000 V

Magnetic straps

MAGNETIC STRAP Z5004

MAGNETIC STRAP Z5020 Extra strength

PQ3198 options

WIRING ADAPTER PW9000 When three-phase 3-wire connection, the voltage cord to be connected can be reduced

WIRING ADAPTER PW9001 When three-phase 4-wire connection, the voltage cord to be connected can be reduced from 6 to 4

from 6 to 3

GPS BOX PW9005

To synchronize the PQ3198 / PW3198 clock to UTC

Option for connecting legacy current sensor models

CONVERSION CABLE L9910

Output connector conversion: $BNC \rightarrow PL 14$

Use by connecting to one of the following legacy sensor models:

CLAMP ON SENSOR 9694/9660/9661/9669 AC FLEXIBLE CURRENT SENSOR CT9667-01/CT9667-02/CT9667-03 *Conversion cable does not supply power to the sensor. CLAMP ON LEAK SENSOR 9657-10/9675

Current sensor options

EXTENSION CABLE L0220-01 2 m (6.56 ft.) EXTENSION CABLE L0220-02 5 m (16.50 ft.) EXTENSION CABLE L0220-03 10 m (32.81 ft.)

Interfaces

SD MEMORY CARD 2GB Z4001 2 GB capacity

SD MEMORY CARD Z4003 8 GB capacity

RS-232C CABLE 9637

9 pin - 9 pin, cross, 1.8 m (5.91 ft) length

LAN CABLE 9642 Straight Ethernet cable, supplied with straight to cross conversion adapter, 5 m (16.41 ft) length

About SD memory cards Be sure to use genuine HIOKI SD memory cards with

HIOKI instruments. Use of other SD memory cards may prevent data from being properly saved or loaded as proper operation is not guaranteed.

Carrying cases and waterproof boxes

CARRYING CASE C1009 Bag type, Includes compartment for options CARRYING CASE C1001 Soft type, Includes compartment for options

CARRYING CASE C1002

Hard trunk type. Includes

compartment for options

Waterproof box For outdoor installation, IP65

Standard accessories (also available for separate purchase)

Comes with the PQ3100

VOLTAGE CORD L1000-05 Red/ Yellow/ Blue/ Gray/ Black each 1, 3 m (9.84 ft) length, Alligator clip ×5

AC ADAPTER Z1002 For main unit, 100 to 240 VAC

BATTERY PACK Z1003 NiMH, Charges while installed in the main unit
